SwingNote Golf

Privacy Policy

Effective 12 November 2026

PERSONAL DATA WE COLLECT

0

We have no servers, no accounts and no analytics. Nothing you do in the app reaches us.

WHERE YOUR SWINGS ARE KEPT

2

Your iPhone and your Apple Watch, and nowhere else, unless you choose to save sessions to Apple Health.

ABOUT THIS POLICY

SwingNote Golf (“the app”) is an iPhone app with a companion Apple Watch app that captures your golf swings on the range and shows feedback on them. It is made by Rogier Mulder (“we”). This policy explains which information the app uses, where that information stays, and the choices you have.

In short: the app works entirely on your own devices. We do not collect, receive, sell or share any information about you.

WHAT THE APP USES, AND WHERE IT STAYS

Motion sensor data

Apple Watch · iPhone

While a session runs, the watch reads its accelerometer and motion sensors to detect swings, ball impact, arm speed and tempo. Only the few seconds around each swing are kept. A swing waits on the watch until your iPhone has received it, and is then removed from the watch.

Sessions and swings

iPhone

Each session is stored on your iPhone with its swings: the time, the sensor data of each swing, whether it was a shot or a practice swing, its tempo, its club group and the target it was judged against.

Settings

iPhone · Apple Watch

Your handedness, your target tempo for each club group and the last club group you chose. The iPhone passes them to the watch so it can judge your swings.

Apple Health

Only with your permission

If you allow it, each session is saved to Apple Health as a golf workout, with the heart rate and active energy measured during the session. The app reads only those two types during a session and reads no other Health data. You can change this at any time in the Health settings of your iPhone.

SUBSCRIPTION AND RATINGS

The subscription and its free trial are sold and managed by Apple through the App Store; we never receive your name, Apple ID or payment details. The app only asks the App Store whether your subscription is active. After a good session the app may show Apple's rating prompt. Purchases and ratings fall under **Apple's Privacy Policy**.

WHAT WE DON'T DO

- No account, sign-in or registration.
- No servers: apart from Apple's App Store services for the subscription, the app makes no internet connections.
- No analytics, advertising, tracking or third-party code.
- No sale or sharing of your information. Health data is never used for advertising.

BETWEEN YOUR WATCH AND YOUR IPHONE

Swings and settings travel directly between your Apple Watch and the iPhone it is paired with, over Apple's own encrypted connection for paired devices. They do not pass through our systems.

BACKUPS

Like other app data, your sessions can be included in the backups of your iPhone, such as iCloud Backup or a backup on your computer, depending on your own settings. Those backups are handled by Apple under **Apple's Privacy Policy**, not by us.

DELETING YOUR INFORMATION

- Delete a session in the app to remove it with all its swings and sensor data.
- Delete the app from your iPhone and Apple Watch to remove everything it stored.
- Workouts in Apple Health are kept when you delete a session or the app. Manage or delete them in the Health app.

YOUR RIGHTS

Under the General Data Protection Regulation (GDPR) and similar laws, you have the right to access, correct and delete personal data held about you. We hold no personal data about you, but you are always welcome to contact us with a question or request. You also have the right to lodge a complaint with a data protection authority, in the Netherlands the Autoriteit Persoonsgegevens. The app collects no information from anyone, including children. If this changes, we will update this policy and its effective date.
